

SpeakGeez

Tigrinya keyboard, voice, and translation — in one iOS app

lomisolutions.com

SpeakGeez is the first iOS app that lets you voice-type in Tigrinya. Speak naturally — in Ge'ez script — and watch your words appear inside any app on your phone. The Tigrinya keyboard, speech recognition, English↔Tigrinya translation, and Tiglish script conversion all live in one place, designed for the diaspora and anyone learning the language.

FEATURES

Tigrinya voice typing. Speak Tigrinya, get clean Ge'ez text. Powered by an in-house speech-to-text model fine-tuned for Tigrinya on top of Meta AI's **Wav2Vec2-BERT 2.0** (*facebook/w2v-bert-2.0*) self-supervised base — not a generic multilingual fallback. *This is the headline feature.*

System Ge'ez keyboard. A full Tigrinya keyboard installs into iOS and works in every app — Messages, Mail, Notes, social, anywhere you type.

English ↔ Tigrinya translation. Translate quickly in either direction without leaving the app. Useful both for diaspora and for English speakers reaching out in Tigrinya.

Tiglish (Latin ↔ Ge'ez). Type in Latin-letter Tigrinya and convert to Ge'ez script, or vice versa. Great for learners who think phonetically before they read Fidel.

English voice input on-device. When you switch to English voice typing, recognition runs locally via Apple's on-device speech — your audio never leaves the phone.

Everything integrated. Keyboard, voice, translation, transliteration, and a learning surface — one app, one sign-in, one consistent design.

UNDER THE HOOD

The Tigrinya STT model is fine-tuned from Meta AI's **Wav2Vec2-BERT 2.0** base (*facebook/w2v-bert-2.0*), following the Ethio-ASR research line. Inference runs on our own GPU infrastructure; audio is processed and discarded immediately and is never used to train future models. English speech recognition uses Apple's on-device speech engine — that audio never leaves your phone.

The point: SpeakGeez exists so Tigrinya speakers can text in Tigrinya as fast as they speak. Everything else in the app is built to support that.
