

SpeakTigrinya

Tigrinya keyboard, voice, and translation in one iOS app

lomisolutions.com/speaktigrinya · [App Store:](https://apps.apple.com/us/app/speaktigrinya/id6768473172)
apps.apple.com/us/app/speaktigrinya/id6768473172

SpeakTigrinya lets you speak Tigrinya and get text instantly. No more typing. It is the all in one Tigrinya keyboard for iPhone, built for the Eritrean and Tigrinya speaking community at home and across the diaspora. Speak and watch your words appear, translate without leaving your conversation, send custom Eritrean stickers, and practice the Tigrinya Fidel, all from one keyboard that works in every app.

FEATURES

Voice typing. Speak Tigrinya and get Tigrinya text instantly. This is the headline feature.

Three ways to type. A Tigrinya keyboard with Tiglish shortcuts, a full Ge'ez keyboard, and a handwriting keyboard.

Instant translation. Tigrinya to English and back, right inside any chat. Powered by Google Translate.

Eritrean stickers. Custom stickers like injera and jebena, plus emoji search in Tigrinya.

Learn the Fidel. Read, write, and pronounce every letter, with native audio and write from memory practice.

Works everywhere. iMessage, WhatsApp, Notes, Mail, and any app with a keyboard.

Private by design. The keyboard never collects, logs, or transmits your keystrokes.

UNDER THE HOOD

Our Tigrinya speech recognition model is built in house. The Ethio-ASR research benchmarked the leading speech systems on Tigrinya, including OpenAI's Whisper and Meta's OmniASR family up to 7 billion parameters. The most accurate was a 600M model fine-tuned from the **Wav2Vec2-BERT 2.0** encoder (*facebook/w2v-bert-2.0*, MIT License) on Google's **WAXAL** corpus (CC-BY-SA 4.0), beating models more than ten times its size. We reproduced that training and reached similar accuracy, and we train our own model so we can keep improving it, starting with additional Tigrinya Bible audio. Inference runs on our own GPU infrastructure. Audio is transcribed and immediately discarded, and it is never used to train future models.

Research: [Ethio-ASR \(arxiv.org/abs/2603.23654\)](https://arxiv.org/abs/2603.23654) · Dataset: [WAXAL \(arxiv.org/abs/2602.02734\)](https://arxiv.org/abs/2602.02734)

The point: SpeakTigrinya exists so Tigrinya speakers can text in Tigrinya as fast as they speak. Everything else in the app is built to support that.
